CONTENTS-INDEX: VOLUME 16

AUTHORS

Alker, Henry A. A quasi-paranoid feature of students' extreme attitudes against colonialism, 218–227.

Bandler, Richard J., Jr.: see John P. Flynn.

Beck, Henry: Minimal requirements for a biobehavioral paradigm, 442–455.

Benishay, H. Births and deaths of projects, 169–173.

Bernitt, Daniel: see Networks in higher education: Proceedings of the EDUCOM council meeting seminar.

Bruhn, John G.: see Bruce E. Rodda.

Caldwell, Michel. Wecos: A direct, noniterative, oblique rotation procedure, 567–570.

Cole, Steven G. Coalition preference as a function of vote commitment in some dictatorial "political convention" situations, 436–441.

Dawson, Ronald G.: see James L. McGaugh.

EDUCOM: see Interuniversity Communications Council, Inc.

Edwards, Stephen B.: see John P. Flynn.

Einhorn, Hillel, J., & Gonedes, Nicholas J. An exponential discrepancy model for attitude evaluation, 152–157.

Fiedler, Fred E.: see Uriel G. Foa.

Fiorina, Morris P. A note on probability matching and rational choice, 158–166.

Fishburn, Peter C. A comparative analysis of group decision methods, 538–544.

Flynn, John P., Edwards, Stephen B., & Bandler, Richard J., Jr. Changes in sensory and motor systems during centrally elicited attack, 1–19.

Foa, Uriel G., Mitchell, Terence R., & Fiedler, Fred E. Differentiation matching, 130–142.

Foster, Caxton C., & Horvath, William J. A study of a large sociogram III. Reciprocal choice probabilities as a measure of social distance, 429–435.

Freemen, Linton C. A computer controlled experiment on recency in probability learning, 174–179.

Giannitrapani, Duilio, Rast, Villard T., & Shulhafer, Burton J. Multiple channel direct digital recording of EEG data, 239–243.

Gonedes, Nicholas J.: see Hillel J. Einhorn.

Gordon, David: see Anatol Rapoport.

Guyer, Melvin: see Anatol Rapoport.

Gyr, John W. Book Review: D. R. Olson, *Cognitive development: The child's acquisition of diagonality*, Academic Press, 1970, 236–237.

Halperin, Silas, & Lissitz, Robert W. Statistical properties of Markov chains: A computer program, 244–247.

Hardin, Russell. Collective action as an agreeable *n*-prisoners' dilemma, 472–481.

Hare, A. Paul, & Scheiblechner, Hartmann. Computer simulation of small group decisions: Model three, 399–403.

Hillinger, Claude. Voting on issues and on platforms, 564–566.

Horvath, William J.: see Caxton C. Foster.

Interuniversity Communications Council, Inc. (EDUCOM). Networks in higher education: Proceedings of the EDUCOM council meeting seminar, 490–510.

Krippendorff, Klaus. Reliability of recording instructions: Multivariate agreement for nominal data, 228–235.

Kurtz, Thomas: see Networks in higher education: Proceedings of the EDUCOM council meeting seminar.

LeGates, John: see Networks in higher education: Proceedings of the EDUCOM council meeting seminar.

Licklider, J. C. R.: see Networks in higher education: Proceedings of the EDUCOM council meeting seminar.

Lipowski, Z. J. Surfeit of attractive information inputs: A hallmark of our environment, 467–471.

Lissitz, Robert W.: see Silas Halperin.

Marschak, Jacob. Optimal symbol-processing: A problem in individual and social economics, 202–217.

May, Robert M. Some mathematical remarks on the paradox of voting, 143–151.

McClearn, Gerald E. Behavioral genetics, 64–81.

McClintock, Charles G.: see Frank J. Stech.

McGaugh, James L., & Dawson, Ronald G. Modification of memory storage processes, 45–63.

Millenson, J. R. A programming language for on-line control of psychological experiments, 248–256.

Miller, James G. Living Systems: The group, 302–398.

Miller, James G. The nature of living systems, 277–301.

Miller, M. Clinton, III: see Bruce E. Rodda.

Mitchell, Terence R.: see Uriel G. Foa.

Nagera, Humberto. Book Review: E. J. Anthony & C. Koupernik, *The child and his family*, Wiley, 1970, 167–168.

Napjus, Chris N. DECLARER: A learning bridge-playing program which generalizes and infers, 404–410.

Pitts, Ferris N., Jr. Biochemical factors in anxiety neurosis, 83–91.

Powers, William T. A feedback model for behavior: Application to a rat experiment, 558–563.

Rapoport, Anatol, Guyer, Melvin, & Gordon, David. A comparison of performances of Danish and American students in a "threat game," 456–466.

Rast, Villard T.: see Duilio Giannitrapani.

Roberts, Lawrence G.: see networks in higher education: Proceedings of the EDUCOM council meeting seminar.

Rodda, Bruce E., Miller, M. Clinton, III, & Bruhn, John G. Prediction of anxiety and depression patterns among coronary patients using a Markov process analysis, 482–489.
Rosenthal, David. A program of research on heredity in schizophrenia, 191–201.
Rowell, Harry B., Jr.: see Networks in higher education: Proceedings of the EDUCOM council meeting seminar.
Scheiblechner, Hartmann: see A. Paul Hare.
Shubik, Martin: Games of status, 117–129.
Shulhafer, Burton J.: see Duilio Giannitrapani.
Snyder, Frederick. The physiology of dreaming, 31–44.
Stech, Frank J., & McClintock, Charles G. Cooperative and competitive price bidding in a duopoly game, 545–557.
Watson, Andrew S. Book Review: John M. McDonald, *Homicide threats*, Thomas, 1968, 237–238.
Wiecking, Frederick A.: see David G. Winter.
Wikler, Abraham. Some implications of conditioning theory for problems of drug abuse, 92–97.
Winter, David G., & Wiecking, Frederick A. The new puritans: Achievement and power motives of new left radicals, 523–530.
Witt, Peter N. Drugs alter web-building of spiders: A review and evaluation, 98–113.
Witucki, Jeannette, A language pattern co-occurring with violence-permissiveness, 531–537.
Worden, F. G. Hearing and the neural detection of acoustic patterns, 20–30.

TITLES

About the Authors: 114–115, 188–189, 274–275, 427, 520–522, 580.
Behavioral genetics, by Gerald L. McClearn, 64–81.
Biochemical factors in anxiety neurosis, by Ferris N. Pitts, Jr., 82–91.
Births and deaths of projects, by H. Benishay, 169–173.
Book Reviews: 167–168, 236–238.
Changes in sensory and motor systems during centrally elicited attack, by John P. Flynn, Stephen B. Edwards, & Richard J. Bandler, Jr., 1–19.
Coalition preference as a function of vote commitment in some dictatorial "political convention" situations, by Steven G. Cole, 436–441.
Collective action as an agreeable n-prisoners' dilemma, by Russell Hardin, 472–481.
Comparative analysis of group decision methods A. By Peter C. Fishburn, 538–544.
Comparison of performances of Danish and American students in a "threat game," A. By Anatol Rapoport, Melvin Guyer, & David Gordon, 456–466.
Computer controlled experiment on recency in probability learning, A. By Linton C. Freeman, 174–179.
Computer Program Abstracts: 180–187, 257–273, 411–426, 511–519, 571–579.
Computer simulation of small group decisions: Model three, by A. Paul Hare & Hartmann Scheiblechner, 399–403.
Cooperative and competitive price bidding in a duopoly game, by Frank J. Stech & Charles G. McClintock, 545–557.
DECLARER: A learning bridge-playing program which generalizes and infers, by Chris N. Napjus, 404–410.
Differentiation matching, by Uriel G. Foa, Terence R. Mitchell, & Fred E. Fiedler, 130–142.
Drugs alter web-building of spiders: A review and evaluation, by Peter N. Witt, 98–113.
Exponential discrepancy model for attitude evaluation, An. By Hillel J. Einhorn & Nicholas J. Gonedes, 152–157.
Feedback model for behavior: Application to a rat experiment, A. By William T. Powers, 558–563.
Games of status, by Martin Shubik, 117–129.
Hearing and the Neural detection of acoustic patterns, by F. G. Worden, 20–30.
Heredity in schizophrenia, A program of research on. By David Rosenthal, 191–201.
Implications of conditioning theory for problems of drug abuse, Some. By Abraham Wikler, 92–97.
Language pattern co-occurring with violence-permissiveness, A. By Jeannette Witucki, 531–537.
Large sociogram III. Reciprocal choice probabilities as a measure of social distance, A study of a. By Caxton C. Foster & William J. Horvath, 429–435.
Living systems: The group, by James G. Miller, 302–398.
Living systems, The nature of. By James G. Miller, 277–301.
Mathematical remarks on the paradox of voting, Some. By Robert M. May, 143–151.
Minimal requirements for a biobehavioral paradigm, by Henry Beck, 442–455.
Modification of memory storage processes, by James L. McGaugh & Ronald G. Dawson, 45–63.
Multiple channel direct digital recording of EEG data, by Duilio Giannitrapani, Villard T. Rast, & Burton J. Shulhafer. 239–243.
Networks in higher education: Proceedings of the EDUCOM council meeting seminar. Introduction, by John LeGates, 490–492. Intra-university networks, by Daniel Bernitt, 492–494. Regional networks, by Thomas Kurtz, 494–497. Program-sharing networks, by Harry B. Rowell, Jr., 497–499. National networks, by Lawrence G. Roberts, 500–508. Summary, by J. C. R. Licklider. 508–510.
New puritans: Achievement and power motives of

new left radicals, The. By David G. Winter & Frederick A. Wiecking, 523–530.
Optimal symbol-processing: A problem in individual and social economics, by Jacob Marschak, 202–217.
Physiology of dreaming, The. By Frederick Snyder, 31–44.
Prediction of anxiety and depression patterns among coronary patients using a Markov process analysis, by Bruce E. Rodda, M. Clinton Miller, III, & John G. Bruhn, 482–489.
Probability matching and rational choice, A note on. By Morris P. Fiorina, 158–166.
Programming language for on-line control of psychological experiments, A. By J. R. Millenson, 248–256.
Quasi-paranoid feature of students' extreme attitudes against colonialism, A. By Henry A. Alker, 218–227.
Reliability of recording instructions: Multivariate agreement for nominal data, by Klaus Krippendorff, 228–235.
Statistical properties of Markov chains: A computer program, by Silas Halperin & Robert W. Lissitz, 244–247.
Surfeit of attractive information inputs: A hallmark of our environment, by Z. J. Lipowski, 467–471.
Voting on issues and on platforms, by Claude Hillinger, 564–566.
Wecos: A direct, noniterative, oblique rotation procedure, by Michel Caldwell, 567–570.
